NGUYEN HOAI PHONG

Full Stack Developer

(+84) 865 932 614 | dev.hoaiphong@gmail.com | Ho Chi Minh City, Vietnam

SUMMARY

Full Stack Developer with 4+ years of experience building and scaling SaaS products, owning features end to end across Next.js, NestJS and AWS. Comfortable moving between growth-facing work (SEO, landing pages, CMS) and core product features used by millions of users, with a consistent focus on performance, scalability and cost efficiency.

Actively adopt AI tools in day-to-day development and team workflows to shorten delivery cycles and improve code quality, and keep learning how they can be applied to the product itself. Regular host of internal sharing sessions and mentor to junior developers; looking for a core-team or team-lead role where I can ship product and help the team grow.

WORK EXPERIENCE

Designveloper - Custom Software Development Company 02/2024 – Present

Full Stack Developer

Dedicated team of 100+ engineers organized into multiple squads, building Lumin PDF (New Zealand) — a SaaS PDF platform with 100M+ users. Stack: Next.js, Gatsby, NestJS, MongoDB, RabbitMQ, AWS (Lambda, S3, SQS), Datadog.

In-App PDF Editor Squad

- Build and maintain core editor features that users interact with daily: annotate, e-sign, edit text, OCR, merge/rotate and AI-powered document tools — Next.js front end backed by NestJS services communicating over gRPC.
- Developer in charge of the PDF × Lumin Sign integration — creating signature fields on PDFs and handing off to Lumin Sign for signing. Positioned Lumin against DocuSign and helped win multiple deals worth an estimated **$29,500**.
- Rebuilt the layout and flow of PDF actions (merge, rotate, etc.) and tailored them for a financial-services customer, supporting a deal worth **~$16,000**.
- Contributed feature mapping and migration support for the move from a third-party PDF engine to Lumin's in-house PDF SDK — an initiative estimated to save the client **~$5M**.
- Core contributor to the "AI Migration" — the largest campaign in Designveloper's history, delivered in **2 weeks**: consolidated per-team repos into a single codebase, moved Gatsby to full Next.js, Bitbucket → GitHub, Jira/Confluence → Linear/Notion, and embedded AI tooling into the workflow. A feature previously estimated at **~1 year** to ship was delivered in **2 weeks** afterwards.

Growth & Landing Page Squad

- Built and maintained high-performance, SEO-driven landing pages with Gatsby, Next.js and React; tool pages (Merge, Split, Compress, Annotate) contributed to **100K+ signups in a single month**.
- Shipped the PDF Localization feature (country-specific PDF content in the library): clicks grew from **15.9K** (Jan–May 2024) to **36.8K** (May–Dec 2024).
- Led the migration from Next.js Page Router to App Router with Server Components, and moved the backend from Next.js API routes to NestJS for scalability.
- Integrated Prismic, HubSpot and Strapi so marketing could launch campaigns and static pages without developer involvement (no-code workflow).
- Migrated Google Tag Manager to server-side, cutting client-side JavaScript and improving landing-page performance by **2–4%**.
- Developed PDF template pages that ranked in the **top 10** of Google search results.

Beyond the codebase

- Host and speaker at internal sharing, workshop and innovation sessions (presented in English to teammates and the client) — received the **"Sharing Spark Award"** for outstanding knowledge sharing.

- Mentor in the company mentorship program; directly supervised an intern who passed the internship and now works full-time on Lumin.

Saigon MIO Technology JSC 04/2022 – 02/2024
Full Stack Developer

Full-time. Fast-paced agency delivering MVPs and demo products for multiple clients.

- Owned full-stack delivery of many MVPs and demos under tight timelines — from MySQL schema design through React/Next.js front ends on an MVC backend — giving clients working products to validate and pitch.
- Integrated and synchronized payment gateways: MoMo, ZaloPay, VNPAY, ChargeBee and Xendit.
- Built pixel-accurate UI from Figma designs using Next.js, React and MUI.
- Member of the R&D team researching and integrating emerging technologies, including AI-driven features, into internal systems; led Next.js knowledge-sharing sessions that shaped the frontend stack for later projects.

BESSFU Solution Technology Co., Ltd. 04/2022 – 09/2023
Frontend Developer (part-time, remote)

- Frontend development for the VUS English e-learning platform, focusing on responsiveness and cross-device UX.
- Designed and built interactive learning mini-games (math challenges, memory matching, word association, pronunciation-based image selection) with JavaScript and jQuery.

SKILLS

FRONTEND: React, Next.js (App Router, Server Components), Gatsby, TypeScript, Tailwind CSS, shadcn/ui, MUI, Micro-frontend (Module Federation)

BACKEND: NestJS, Node.js, .NET Core, REST APIs, GraphQL, gRPC, RabbitMQ, microservice architecture

DATA: MongoDB, PostgreSQL, MySQL, Redis

CLOUD & DEVOPS: AWS (Lambda, S3, SQS, Serverless, etc.), Docker, Datadog monitoring, server-side Google Tag Manager

CMS & GROWTH: Prismic, HubSpot, Strapi, Intercom, Chili Piper

AI-ASSISTED DEVELOPMENT: AI coding agents, MCP (Model Context Protocol), agent skills, custom rules & prompts, AI-driven workflows

TOOLS & PRACTICES: Atlassian toolkit (Jira, Bitbucket, Confluence), GitHub, Linear, Notion, Figma, monorepo

EDUCATION

Ho Chi Minh City University of Natural Resources and Environment (HCMUNRE) 09/2018 – 09/2022
Engineer's Degree in Information Technology

CERTIFICATIONS

AWS Certified Developer – Associate

LANGUAGES

VIETNAMESE: Native

ENGLISH: Intermediate — daily communication with an overseas client, presents technical sharing sessions in English
